Disclaimer

Accepting a project audit is a sign of confidence and is usually the first indicator of trust for a project, but it does not guarantee that a team will not remove all liquidity, sell tokens, or engage in any other type of fraud. There is also no way to prevent private sale token holders from selling their tokens. It is ultimately your responsibility to read all documentation, social media posts, and contract code for each particular project in order to draw your own conclusion and define your own risk tolerance.

DRIVENsecurity accepts no responsibility for any losses or speculative investments. This audit's material is given solely for informational reasons and should not be construed as investment advice.

Project Details

Project name: MoonPirate

Contract Address: 0xf09b7b6ba6dab7cccc3ae477a174b164c39f4c66

Symbol: MOONPIRATE

Decimals: 9

Initial supply: 100,000,000,000,000

Useful Links

Website: moonpirate.finance

Twitter: twitter.com/moonpiratebsc

Telegram: t.me/MoonPirate

Instagram: instagram.com/moonpiratebsc

Audit Score

4.8/5

Fundamental Analysis

Website Overview

Registered on: 2021-04-16

Expires on: 2022-04-16

Hosting provider: GoDaddy.com

SSL certificate: valid

SEO optimization score: 93%

Spell check: all spelling is correct

Average loading time: 3.6s – poor

JavaScript errors: none

Broken links: none

Registrar data: private

Responsive web design:

- mobile friendly
- elements are loaded properly
- responsive to browser resize

Fundamental Analysis

Website Overview

Conclusion

The website design is fantastic, and the team has worked hard to make it look visually appealing, complete with great animations. The color scheme on the website is phenomenal, and everything is made with care and attention to detail. The website even includes legal information and a privacy policy, which are uncommon for crypto projects. As project owners, we personally love the website's news section and wallet tracker. The MoonPirate website SEO received a score of 93, which is excellent. We have no complaints about it other than the loading time and a fully private registrar data

3.4 seconds loading time – we recommend removing unnecessary CSS, JS and compressing some images

Fundamental Analysis

Social Media

Social Media Networks:

- Twitter
- Telegram
- Instagram
- Reddit
- Discord
- YouTube
- Medium

Telegram: - active chat moderation

- regular responses from team members

Twitter: - more activity is suggested

- broken link in Twitter description
- a lot of graphically-enhanced posts

YouTube: - previous AMAs uploaded

- high-quality content (visual roadmap, launch party, official anthem...)

Instagram: - more activity is suggested

- a lot of graphically-enhanced posts

Fundamental Analysis

Social media

Conclusion

Social media presence on existing social networks is great. Every social media platform has high-quality graphics that appear representative. Our only suggestion is to be more active on Twitter with posts, as that is the leading cryptocurrency social media platform in our opinion, and it provides a lot of exposure to projects.

Discord and Telegram chats are moderated and monitored around the clock by team members, and there is always someone available to answer your question.

Fundamental Analysis

Team (picture 1.1 & 1.2)

Team members: 10

Doxxed team: 7 team members are officially doxxed and the remaining 3 have privately doxxed themselves to us

Existing video AMAs: yes

Existing voice AMAs: yes

Existing text AMAs: yes

Linked social platforms to team members: yes

Team engagement with the community: yes

Team members have previous experience: yes

Fundamental Analysis

Team

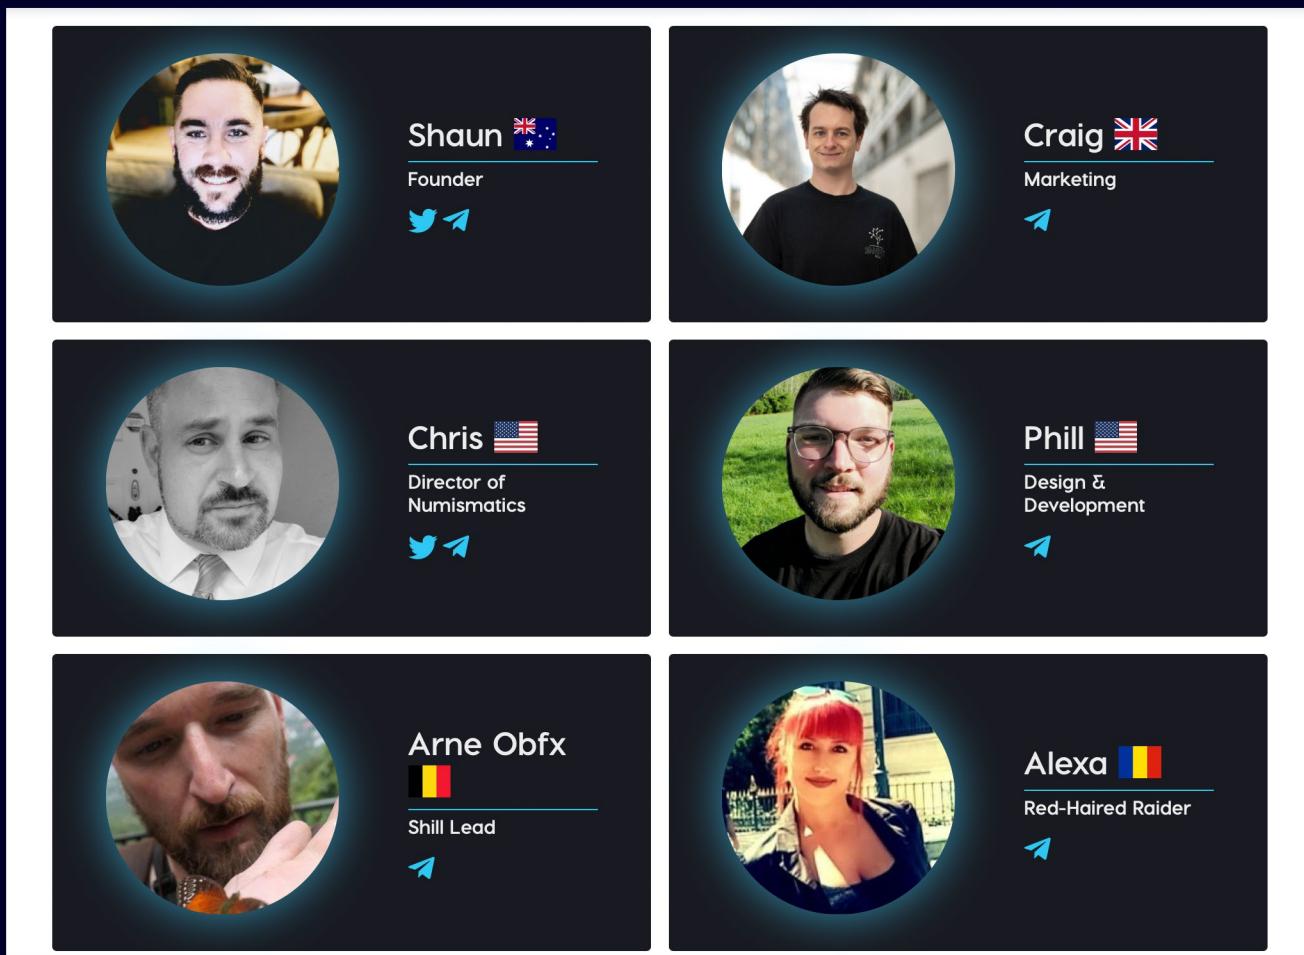

Conclusion

MoonPirate team is made up of ten core-team members, and they appear to be very organized, with everyone having their own role in the team.

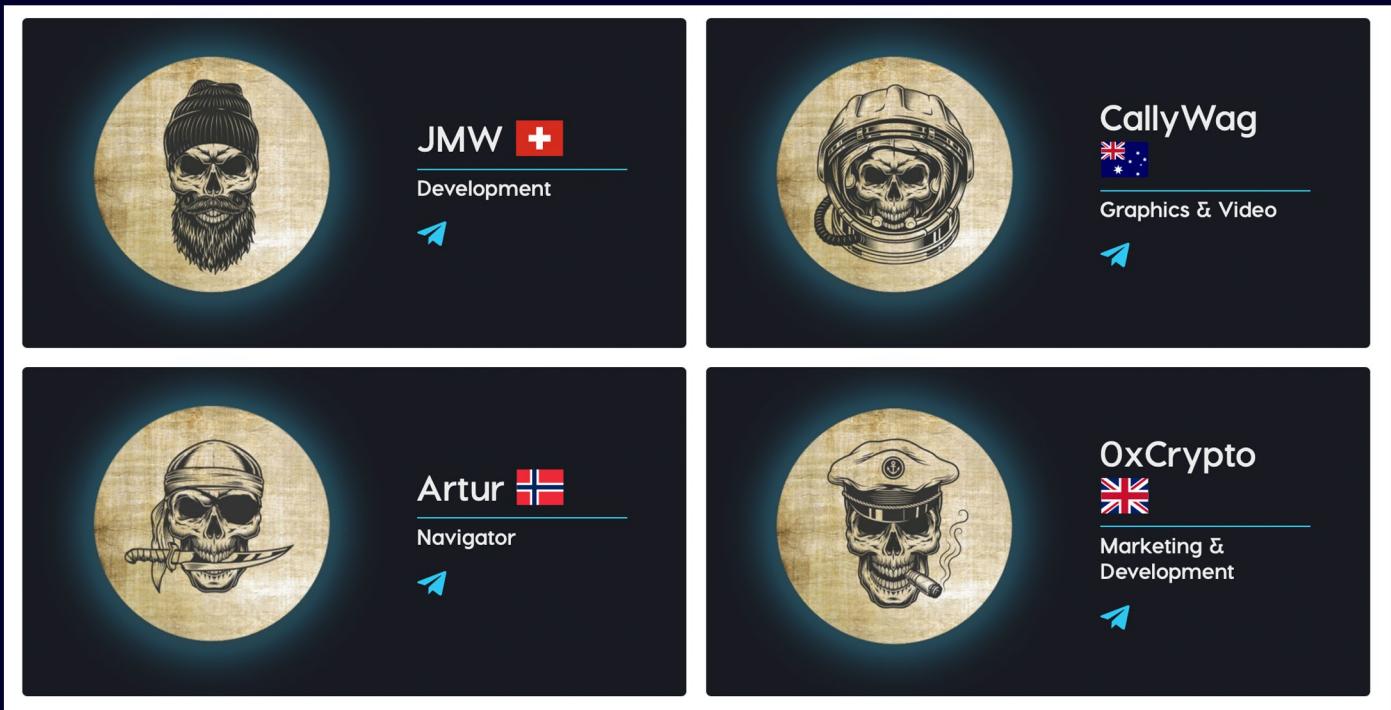

Although the three team members who have not been doxxed have decided to doxx for us as proof of confidence, all doxxing information will be kept strictly confidential between us.

MoonPirate team had prior experience in this field and readily agreed to perform this audit and answer our questions, which is a huge plus.

MoonPirate team was transparent and communicative with us, and they are constantly answering questions from their investors in Telegram chat, which is very important these days in the midst of the chaos of new BSC tokens.

Picture 1.1 – team members

Picture 1.2 – team members

Fundamental Analysis

Project Mission

Real-world mission: yes

Realizable mission: yes

Inovative idea: yes

Mission Overview

MoonPirate has a fantastic mission that will undoubtedly make a difference in the crypto world, and they are already working hard to make it a reality.

MoonPirate aims to establish the MoonPirate ecosystem as the first and most revolutionary project to connect blockchain utility with the delivery of community-governed, physical consumables.

Their community collaborates with the team on all major decisions, and they are truly a community-driven project.

Fundamental Analysis

Current Progress (picture 2.1 , 2.2 & 2.3)

MoonPirate recently held a launch party for their first beer, Tropical IPA. Canning is the next step for the Tropical IPA, and discussions between Captain MoonPirate and Catchment are currently underway.

In the meantime, they are launching a second beer that has already been voted on and will be available on tap to begin with, similar to the previous beer.

Once that is confirmed with catchment, MoonPirate will hold a competition involving their community to create a label design, and they will vote on the best option.

In terms of rum, NOK distillery is awaiting FDA recipe approval, and once that is granted, they will begin production.

MoonPirate energy drinks will be available in 2 or 3 days once their new shop site (Pirate Cove) is up and running, with the first batch shipping only to the United States.

Finally, they have four different types of brass coins for sale. Those will also be available for purchase once the store is open.

Energy Drink**

Fundamental Analysis

Project Mission

Conclusion

MoonPirate pleasantly surprised us with their project mission, and they are dedicated to their work and the products they deliver. They make certain that everything is of the highest quality and that everything is delivered on time. The best part of this entire story is that the community is collaborating with them on decisions.

They're creating an entire ecosystem around it, and their products are only getting bigger. This year, they also formed their own LLC, which is unusual for crypto projects and provides us and their investors with a great deal of confidence.

Once PirateSwap v2 is finished with development, we can expect staking, liquidity pools, an NTF marketplace, and a variety of other features, all of which will be beneficial to the project.

Fundamental Analysis

Tokenomics

Reward to holders : 1.2%

Liquidity-pool tax : 2%

Token burn: 0.8%

Conclusion

Every transaction on the MoonPirate smart contract is subject to a 4% tax, which is advantageous for investors because it eliminates the need to pay high taxes.

\$MoonPirate is the MoonPirate platform's governance token. Ownership is renounced, and liquidity is burned. Tokenomics are well-designed for a long-lived self-sustaining token.

Fundamental Analysis

Whitepaper Overview

Conclusion

MoonPirate's whitepaper is well-written, and everything there is easy to understand. We absolutely love their investor deck, which is a visual explanation of their entire ecosystem and is both detailed and visually appealing for both cryptocurrency newcomers and crypto enthusiasts.

Their investor deck unquestionably differentiates them from other crypto projects.

We had no complaints or questions for the team regarding the whitepaper or investor deck.

Fundamental Analysis

Liquidity (picture 3.1)

Liquidity locked: inapplicable

Period of time: inapplicable

Total value locked: inapplicable

Total liquidity value: 990.79 BNB

Liquidity lock platform: inapplicable

Liquidity pool holders: bit.ly/3lldzLW

Locked Liquidity: inapplicable

Conclusion

Because the entire liquidity is burned, this token does not require a liquidity lock and is completely anti-rugable.

This 🍕 PancakeSwap Liquidity Provider (LP) token represents the 📈 BNB and 🎀 MOONPIRATE pairing.

Picture 3.1 – Initial liquidity burned

Fundamental Analysis

Top 10 Holders: (picture 4.1)

How much Top 10 holders have (%): 75.54%

Burn Address – the top token holder is the burn address holding 65.5667% of the total supply. These tokens are removed from circulation forever.

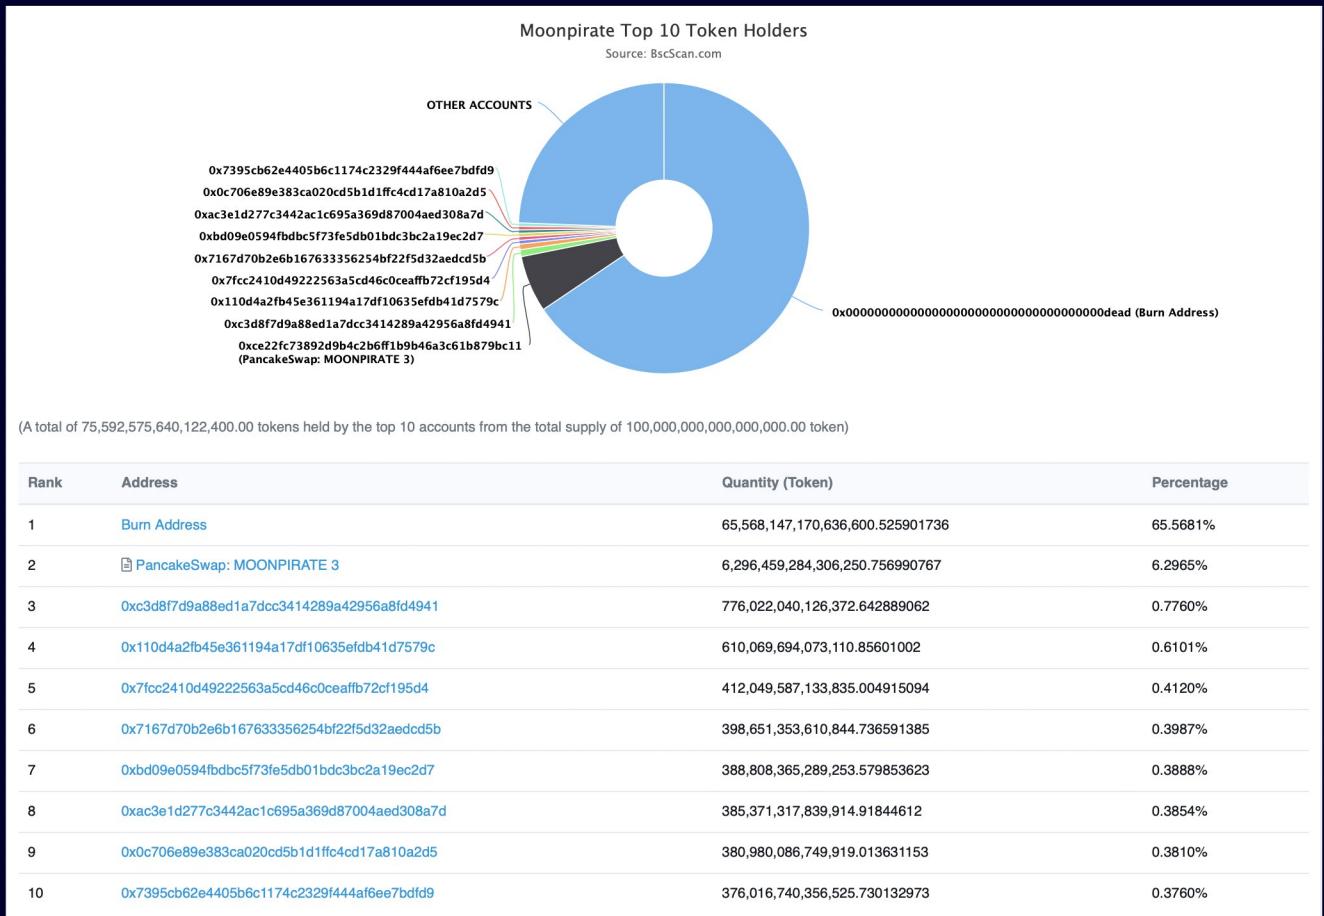

PancakeSwap: MOONPIRATE – 2nd wallet is containing 6.2430% of the supply. This is the PancakeSwap liquidity pool.

3rd holder is a wallet containing 0.7760% of the supply. This wallet is controlled by a private investor.

4th holder is a wallet containing 0.6101% of the supply. This wallet is controlled by the regular holder

Wallets from 5-8 contain 1.5849% of the supply. These wallets are controlled by the team members.

Wallets from 9-10 contain 0.757% of the supply. These wallets are controlled by the private investors.

Picture 4.1 - Top 10 holders

Fundamental Analysis

Top 10 Holders

Conclusion

The top ten MoonPirate holders appear to be in good shape; we have no concerns about any wallets that could potentially drive the price down significantly; even the largest holders have amounts that are less than 1%, which is brilliant.

One of the team members gave us all of the addresses to the team wallets, and we have seen no suspicious activity with them.

Without hesitation, the development team provided us wallet-related information.

Fundamental Analysis

Contract Ownership

Ownership renounced: yes

Conclusion

Retaining ownership gives developers authority over critical contract components, potentially allowing them to change contract functions; however, because MoonPirate developers renounced it, they no longer have control over it and are unable to make any changes.

Fundamental Analysis

Our suggestions

- improve the website's loading time, and fix other issues mentioned in conclusion**
- include links to the team's social media platforms (LinkedIn)**
- Twitter and Instagram should be used more frequently**
- have a page with transparent addresses for team wallets on website (optional)**

Fundamental Analysis

Signs of confidence

- team fully doxxed to us
- established LLC
- top ten holders in excellent condition
- already delivered products
- transparent fee structure
- transparent liquidity burn
- active social media presence
- SSL certificate found and valid
- active Telegram & Discord chat moderation, open to answer questions
- team willingly requested an audit from us, which is fantastic, and they are eager to correct their mistakes
- team was open and honest in answering any questions we had about the audit

Fundamental Analysis

Basic Contract Analysis

Mint Function	no
Blacklist Function	no
Max Transaction	yes
Honeypot Function	no
Max Sell	no
Disable Trading	no
Contract Ownership	renounced
Contract Code	verified
Token Supply	100,000,000,000,000

Conclusion

There are no malicious functions in the contract code, and contract ownership has been renounced, so the team is unable to make any suspicious moves on it.
