DRIVENsecurity
Technical Audit

BridgeDeFi

Static Code Analysis & Manual
Verification For Smart Contract

Disclaimer

Accepting a project audit can be viewed as a sign of confidence and is typically the first indicator of trust for a project, but it does not guarantee that a team will not remove all liquidity, sell tokens, or engage in any other type of fraud. There is also no method to restrict private sale holders from selling their tokens. It is ultimately your obligation to read through all documentation, social media posts, and contract code for each particular project in order to draw your own conclusions and define your own risk tolerance.

DRIVENlabs Inc. accepts no responsibility for any losses or encourages speculative investments. This audit's material is given solely for information reasons and should not be construed as investment advice.

Table Of Contents

Project Details

Name of the project:
BridgeDeFi

Type of the Smart Contract:
Custom Smart Contract

Chain:
Goerli Testnet

Address:
0xb9767B6037144352739f8DA8CAA6A4f632017905

Explorer Link:
https://goerli.etherscan.io/
address/0xb9767B6037144352739f8DA8CAA6A4f632017905#co
de

Static Analysis

SWC ISSUES	STATUS
Function Default Visibility	PASSED
Integer Overflow and Underflow	PASSED
Outdated Compiler Version	PASSED
Floating Pragma	LOW-SEVERITY
Unchecked Call Return Value	PASSED
Unprotected Ether Withdrawal	PASSED
Unprotected SELFDESTRUCT Instruction	PASSED
Reentrancy	PASSED
State Variable Default Visibility	PASSED
Uninitialized Storage Pointer	PASSED
Assert Violation	PASSED
Use of Deprecated Solidity Functions	PASSED
Delegatecall to Untrusted Callee	PASSED
DoS with Failed Call	PASSED
Transaction Order Dependence	PASSED
Authorization through tx.origin	PASSED
Block values as a proxy for time	PASSED
Signature Malleability	PASSED
Incorrect Constructor Name	PASSED
Shadowing State Variables	PASSED
Weak Sources of Randomness from Chain Attributes	PASSED
Missing Protection against Signature Replay Attacks	PASSED
Lack of Proper Signature Verification	PASSED
Requirement Violation	PASSED

Static Analysis

SWC ISSUES	STATUS
Write to Arbitrary Storage Location	**PASSED**
Incorrect Inheritance Order	**PASSED**
Insufficient Gas Griefing	**PASSED**
Arbitrary Jump with Function Type Variable	**PASSED**
DoS With Block Gas Limit	**PASSED**
Typographical Error	**PASSED**
Right-To-Left-Override control character (U+202E)	**PASSED**
Presence of unused variables	**PASSED**
Unexpected Ether balance	**PASSED**
Hash Collisions With Multiple Variable Length Arguments	**PASSED**
Message call with hardcoded gas amount	**PASSED**
Code With No Effects	**PASSED**

Issues

Static Code Analysis
"A Floating Pragma is set" - does not represent a security risk.

Manual Verification
No isseues found.

Functions

Only-owner functions
- createProject - create a new project and deploy a new "Bridge" smart contract;
- createCompany - create a company profile;
- updateCompanyDetail - update a parameter from company's profile;
- updateFeeWalletAddress - update the fee receiver;

External functions called from the newly deployed "Bridge" smart contract
- addCompanyNFTsSold - update the number of minted (sold) NFTs;
- addTotalRevueToCompany - add the revenue from minting NFTs to the company's profile;

Conclusion

The smart contracts (BridgeFactory.sol and Bridge.sol) create a closed environment in which only "approved" users can perform actions, providing an additional layer of security.

Thank you!
